

From Image to Insight

Superior Radiology Expertise to Accelerate Your Trial

Our Distinctive Team Approach:

A lead radiologist and expert project managers on your team, ensuring effective navigation of complex imaging issues. We hire only highly experienced imaging project managers. Our team is responsive, engaged and dedicated to achieving your goals.

Phase 1 Pancreatic Cancer Sites Missed Responders

Challenge:

Midway through a Phase I oncology study (pancreas & GI tumors), no responders were identified, jeopardizing continuation of the trial

Response:

- > Corrected misinterpretations, discovering true responders initially classified as stable disease
- > Implemented a rigorous independent confirmation of progression, dramatically improving accuracy of response assessment

Outcome:

The accuracy of our reviews enabled the trial to progress to Phase II, saving it from premature closure.

At RadMD, we offer more than just imaging reads; we deliver comprehensive imaging strategy. We provide global scientific operational expertise and a network of **over 300 expert readers**, ensuring precision in your efficacy reads, paramount in determining go or no-go decisions. With tailored solutions, meticulous attention to detail and comprehensive core lab services from development to approval, our client-centric approach eclipses those of large imaging CROs, underscoring our commitment to advancing your trial.

Early-Phase Oncology Trials Through to Approval

In early-phase oncology trials, we can use imaging data to identify early responders and ask questions to get more from standard of care imaging:

- **Imaging protocol development** focused on novel biomarkers and endpoint criteria matched to your agent that will elicit small treatment effects
- **Risk mitigation in site-based reads** ensuring accuracy and consistency from eligibility to progression of disease to reduce discordance
- **Rapid startup and budget-sensitive solutions** while maintaining full regulatory compliance to move nonstop through phases
- **Advanced analyses** including radiomics, volumetrics and tumor growth rate
- **Answers to non-criteria questions** for efficacy signals beyond RECIST that will speed up your trial

RadMD's Expert Reader Group: A Mark of Distinction

- **300+ subspecialty trained radiology experts** ensure therapeutic area expertise from U.S. board-certified, fellowship-trained experts
- **Rapid, adaptive engagement** meets trial specific timelines
- **Exclusive, conflict-free collaboration** means small reader groups, monitored and managed for quality

BRITI Training: Elevating Radiology Standards

Our proprietary **BRITI training program** is a cornerstone of our commitment to excellence, ensuring regulatory compliance and site satisfaction:

- Online, trial-specific training to reduce imaging errors
- Comprehensive testing
- Certifications that are GCP compliant

Experience Comprehensive,
Expert-Led Imaging
